

Business Declares a Climate Emergency

Seetru Limited is proud to be joining Business Declares and the fast-growing network of businesses that acknowledge the urgency of the Climate and Ecological Emergency.

We are committed to reducing carbon emissions emitted directly by our business as much as possible by 2030 and achieve Net Zero before 2050 in line with limiting global warming to below 1.5C.

We recognise the challenges facing the industries we operate in and for the manufacturing sector in achieving these goals, and hope to encourage others to rise above them.

We are bringing environmental considerations into the core of our business decisions, and will continue to innovate to ensure our products and processes are in line with these net zero goals.

Our business direction is to focus on improving the efficiencies of our operations and products, targeting sustainable industries such as hydrogen, and continuing our journey with the goal of becoming B Corp Certified.

Despite our best efforts to reduce our carbon emissions, we recognise that there will be residual carbon emissions remaining. We support two projects through [Forest Carbon](#) to compensate against our direct emissions. The Cordillera Azul National Park REDD+ forest protection and biodiversity area in Peru, and in the UK we support the Hawkshaw, Scottish Borders in the form of ex-ante credits- delivering future carbon savings.

At Seetru, concern for both people and the planet are not new to us and we look forward to sharing our journey and ensuring our voice is part of the collective, resounding call for change.

[Business declares](#) are a not-for-profit organisation committed to raising awareness across the business sector of the need to accelerate action to address climate change, biodiversity loss and social injustice, and to inspire urgent action and debate.
